

**CASE STUDY**

American Tower

Wall mount HVAC

Optional Rigid floor insulation

Optional Telcom port

Challenge:

American Tower needed to find an affordable solution for site structures at cell tower locations nationally. They required on-site installation time to be kept to a minimum, so as not to interrupt normal business operations. The structures also needed to be able to house electronics and battery backup units, and had to meet very specific industry and safety standards.

Solution:

To meet these needs we designed buildings that could be built completely in our factories and delivered fully assembled. On-site installation of buildings could then be easily completed within an hour, by just off-loading the structure into place and anchoring it down in the prescribed location. Each unit was outfitted with an electrical cut-off box, duplex outlets and switches, port mounting, HVAC climate control, and insulation. This building design became part of the project specification so that it could be easily replicated and installed at any of American Tower's locations.

The Tuff Shed Advantage:

- On-site installation time limited to less than an hour
- Insulated structures, outfitted for electrical
- Designed to meet industry and safety standards
- Replicable building design
